## **DETAILED ACTION**

Claims 1-21 are pending in the instant application.

### ***Election/Restriction***

#### **Election of Species**

**Part 1.** Applicant is required to elect one of the species listed below. This application contains claims directed to the following patentably distinct species of the claimed invention, covering the following different types of gene transfer vectors, as set forth in the claims:

- A. Adenovirus vector.
- B. Herpes virus vector.
- C. Parvovirus vector.
- D. Lentivirus vector.
- E. Adeno-associated viral vector.
- F. Liposome-mediated delivery vector.

The different types of gene transfer vectors as outlined in the species election requirement A-F represent distinct inventions because they are drawn to different vectors that are structurally and functionally distinct, having very different modes of action. The different gene transfer vectors require separate searches. The vectors are not so related as to be considered obvious variants. Furthermore, there is nothing on the record to suggest that the vectors are obvious variants.

Art Unit: 1632

**Part 2.** Applicant is further required to elect one of the species listed below. This application contains claims directed to the following patentably distinct species of the claimed invention, covering the following brain regions, as set forth in the claims:

- A. basal ganglia
- B. subthalamic nucleus (STN)
- C. pedunculopontine nucleus (PPN)
- D. substantia nigra (SN)
- E. thalamus
- F. hippocampus
- G. cortex

The different brain regions as outlined in the species election requirement A-G represent distinct inventions because they are drawn to different brain structures requiring different searches for each region. The different brain regions are structurally and functionally diverse. The regions are not so related as to be considered obvious variants. Furthermore, there is nothing on the record to suggest that the different brain regions are obvious variants.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, Claims 1 and 13 are generic.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species associated with the elected invention, even though this requirement is traversed.

Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 1632

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
